Exercice 20

Trouvons le reste de la division enclidienne

de 10²⁰²⁰ par 42

$$10 = 10[42]$$
 $10^3 = 34[42]$ $10^5 = 40[42]$ $10^5 = 10[42]$ $10^6 = 10[42]$ $10^6 = 10[42]$

Comme
$$2020 = 5x7^3 + 6x7^2 + 7 + 4$$

alors $10^{5x7^3} + 6x7^2 + 7 + 4$
alors $10^{5x7^3} + 6x7^2 + 7 + 4$
 $10^{5x7^3} + 6x7^2 + 7 + 4$
 $10^{5x7^3} + 6x7^2 + 7 + 4$
 $10^{5x7^3} + 6x7^2 + 7 + 4$

Clest-
$$\bar{a}$$
-dose, $10^{2020} = [((10^7)^7)^7]^5 [(10^7)^7]^6$
or $10^7 = 10[42]$

$$= 70^{2020} = 10^{5} \times 10 \times 10^{4}$$
 [42]

$$\sqrt{2020} = 10 \times 10^3 [42]$$

auni 10²⁰ = 10⁴ [42]

or 10⁴ = 4 [42]

Lone 102020 = 4 [42].
